

HCV.com

your comprehensive guide to hepatitis C

Resources for
wherever you are
on your journey
to treating HCV

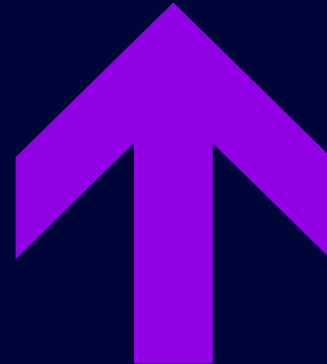

How often do you get to cure your patients of a disease?

2.3 million adults in the United States still have HCV infection,¹ and it's possible some of them are in your care.

HCV treatment has evolved substantially in recent years, offering short duration and cure rates of more than 95%.²

With this evolution, the HCV landscape is shifting to non-specialist healthcare providers.³ HCV.com was created to provide you with education, resources, and support you can count on to help you cure your patients.

Cure means the hep C virus is not detectable in the blood 3 months after treatment ends.
HCV=hepatitis C virus.
